Benjamin Oldén

SOFTWARE DEVELOPER

ABOUT ME

I am a 34-year-old passionate and experienced developer with extensive knowledge in both front-end and back-end development.

With over five years of experience, I have worked with a range of technologies and tools such as Javascript, HTML, CSS, SASS, Bootstrap, React.js, Vue.js, Node.js, C#, .NET, WordPress and SQL.

I am also comfortable with development tools such as VS Code, Git and GitHub.

My background in both work and education has strengthened my analytical ability and my critical thinking.

I am skilled at solving complex problems and enjoy creating innovative and user-friendly solutions that make a difference.

EXPERIENCES

- **BTJ**

  SOFTWARE DEVELOPER 2024 - ongoing

  At BTJ, I work as a Software Developer and have mainly worked with the development of customer applications.

  My main project has been to develop a new application that helps teachers to more easily find suitable books for different grades and themes, which facilitates their work with literature selection at school.

  I have also worked on an application that enables our customers to easily order new cataloging of books.

  In addition, I have participated in the new development of an older internal system to introduce new functions and streamline and automate workflows for our users.

  We work agile at BTJ with daily standups and a scrum-based methodology to plan the projects in sprints.

  I have mainly worked with React.js for frontend and .NET for backend, and have experience with technologies such as Git, SQL, Oracle, Dapper, Azure, TeamCity, Octopus Deploy, DDD and TDD.

- **Lund University of Technology (LTH)**

  SOFTWARE DEVELOPER 2022 - 2024

  At LTH, I worked as a Software Developer where I mainly worked with developing internal systems that are used both by teachers and students who attend LTH.

  I have mainly worked on developing a completely new program planning program which is used, among other things, to be able to plan which programs and courses LTH will offer its students for each new academic year.

  I also work with an internal system where students must submit their documentation for their degree projects. In this system, all handling regarding the process for the degree project also takes place.

  I work with an agile way of working with daily standups and a scrum-based methodology for planning the work in different sprints and evaluating them.

  The technology stack that I mainly used is Vue.js for the frontend with Node.js as the backend.

  I have also used Git, SQL, Stoplight studio, OpenAPI as well as Knex.js, Objections for structuring the data for the backend.

- **Exakta Software**

  SOFTWARE DEVELOPER 2021-2022

  At Exakta software, I have worked as a Software Developer with the company's self-developed business system/e-store with SaaS.

  I mainly worked with backend development with the laravel framework and php in older systems, but also used git, sql, javascript/vue, html and css daily.

  I am used to working with an agile way of working and also with a support ticket system where customers send in tickets for various problems or new developments that are to take place.

  Small project that I developed:

  Backend development of integration to payment solution for e-shop built in php 5.6 with REST API (Svea checkout and swish).

  Development of member forum in laravel 7.1 where I built it module-based to be able to easily integrate into other core systems.

  Development of integration to payment solution in laravel 7.1 where it was integrated into the payment flow that already existed (Dibs payment).

  Development of import php 5.6 which fetches data from xml, REST API and also csv import. Which then imports products with the desired parameters into the E-store.

  Backend development of integration between another system that the customer used where I built on our site into our business system/E-store laravel 7.3. The order is handled in an external system, while our business system must handle payment, order creation and handling of the order.

  Development of integration to 3pl system where our shop php 5.6 would be the master in order management and product creation while the 3pl system would handle status updates and balance related products.

  I have also worked with external business systems such as fortnox and pyramid.

- **Webbyrå Head of Search**

  FULLSTACK DEVELOPER PHP WORDPRESS 2020-2021

  I worked as a web developer at a web agency mainly with wordpress as cms.

  Backend development of e-commerce solutions built in php, javascript and wordpress.

  Integrations built with JSON-based JSON REST API for connection between business systems and the web and payment solution REST API for e-commerce (Integration of clear payment solution).

  Development of e-commerce solutions built in php, javascript and wordpress. Integrations built with JSON-based JSON REST API for connection between the web and google's api.

  Backend development of integration between woocommerce and microsoft businesscentral dynamics as business system built with JSON-based REST API.

  Also worked a lot with listeners for various events and logging of events. Backend development of integration between woocommerce and lime as crm built with JSON-based REST API, as well as integration of payment solution
